VP Fintech Group Introduces the VP Infrastructure Platform (VIP)

Next-generation digital asset infrastructure expected to power the Group's future financial ecosystem

London, United Kingdom – 1 July 2026 – VP Fintech Group Limited (Listing:Asset Match) ("VP Fintech Group" or the "Company") is pleased to announce the introduction of the **VP Infrastructure Platform (VIP)**, the Company's next-generation digital asset infrastructure, which is expected to become the technology foundation for future products and services across the Group.

VIP has been designed as a scalable, modular platform supporting self-custody digital wallets, regulated stablecoins, payment services and embedded financial solutions through a unified technology architecture.

Following completion of the platform's architecture and selection of its core technology stack, development is now underway. Subject to development progress, partner integrations and customary implementation processes, the Company currently expects an initial commercial release during the third quarter of 2026.

Once implemented, VIP is expected to support:

- Self-custody digital asset wallets
- Multi-chain cryptocurrency transfers
- Stablecoin payments and settlement
- Fiat on- and off-ramp capabilities
- Virtual and physical payment cards
- Merchant payment infrastructure
- Embedded financial services
- Enterprise and white-label solutions

The modular design will enable VP Fintech Group to expand its product offering through additional regulated partners and technology integrations without fundamental changes to the underlying platform.

The introduction of VIP builds upon several strategic initiatives announced during 2026, including participation in the Circle Alliance Program through portfolio company Valens Pay, the proposed acquisition of GlblNexus Inc., and the Group's continued investment in next-generation digital asset infrastructure.

Torben Pedersen, Chief Executive Officer of VP Fintech Group, commented:

"The VP Infrastructure Platform represents one of the most important strategic initiatives in our Company's development. Rather than building individual financial products, we are creating a scalable infrastructure capable of supporting multiple services and future business opportunities across the Group."

"We believe the future of financial services will increasingly combine self-custody, regulated stablecoins and traditional payment infrastructure. VIP has been designed to support that evolution while enabling us to introduce new products through a flexible partner ecosystem."

The Company intends to introduce VIP through a phased commercial rollout and will provide shareholders with further updates as significant technical, regulatory and commercial milestones are achieved.
